

UPCOMING INSULATOR REPLACEMENT

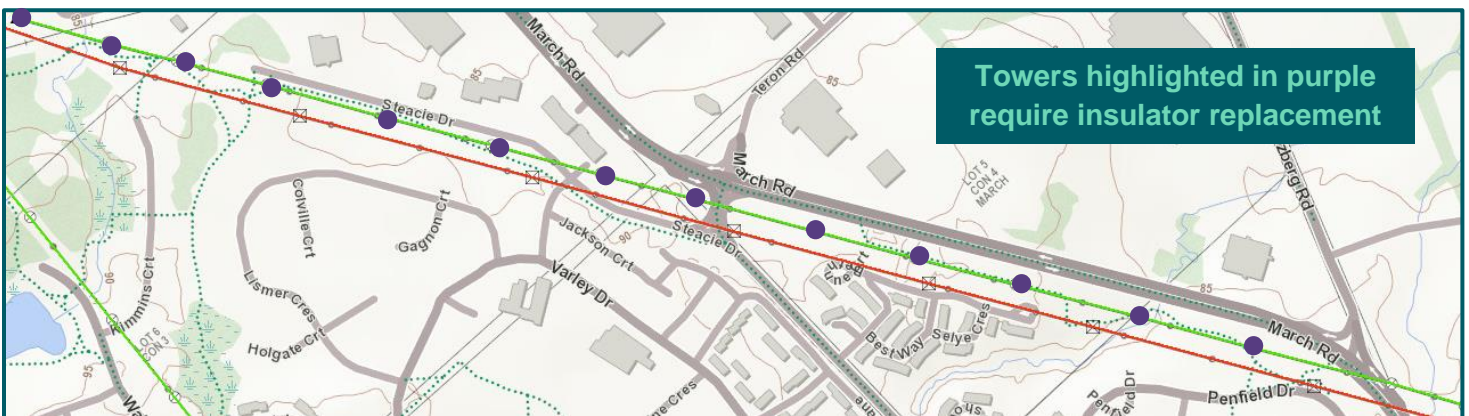

Hydro One is working in your community to ensure a safe and continued supply of power to the City of Ottawa

WORK REQUIRED

In order to continue providing a safe and reliable supply of electricity to the homes and businesses in the City of Ottawa, Hydro One is required to replace insulators in the high-voltage transmission corridor as they've reached end-of-life. Insulators keep the energized lines away from the tower, and prevent short circuits to the ground. Please see map below for work area.

WHAT TO EXPECT

 <p>Work Requirements</p>	<ul style="list-style-type: none"> Trees and other vegetation will require trimming or removal to provide safe access for crews and equipment. Insulators will be replaced on the towers in the high-voltage transmission corridor as they've reached end-of-life.
 <p>Work Methods</p>	<ul style="list-style-type: none"> Large support vehicles, such as bucket trucks, will be used to replace the insulators. Our crews will use hand tools, such as chainsaws and pruners, to trim and remove the necessary vegetation around tower bases and to provide safe access to crews and equipment. If necessary, mechanical equipment will be used to remove dense sections of vegetation around tower bases and to provide safe access to crews and equipment.
 <p>Temporary Interruptions</p>	<ul style="list-style-type: none"> As work is being completed, you may notice an increase in noise. Temporary closures of certain sections of walking trails may be required to ensure the safety of the public and our crews. Our staff will re-direct community members around the closures.
