

MOSQUITO CONTROL PROGRAM – KANATA NORTH

Weekly report –August 11th to August 17th, 2024

MONITORING and WEATHER

Accumulation of water: total of 30,6 mm

Date of precipitation: August 11st, August 17th and August 18th

Is there presence of larvae on the field?: Yes No

Note: Larval hatching has been observed in some sites.

TREATMENT

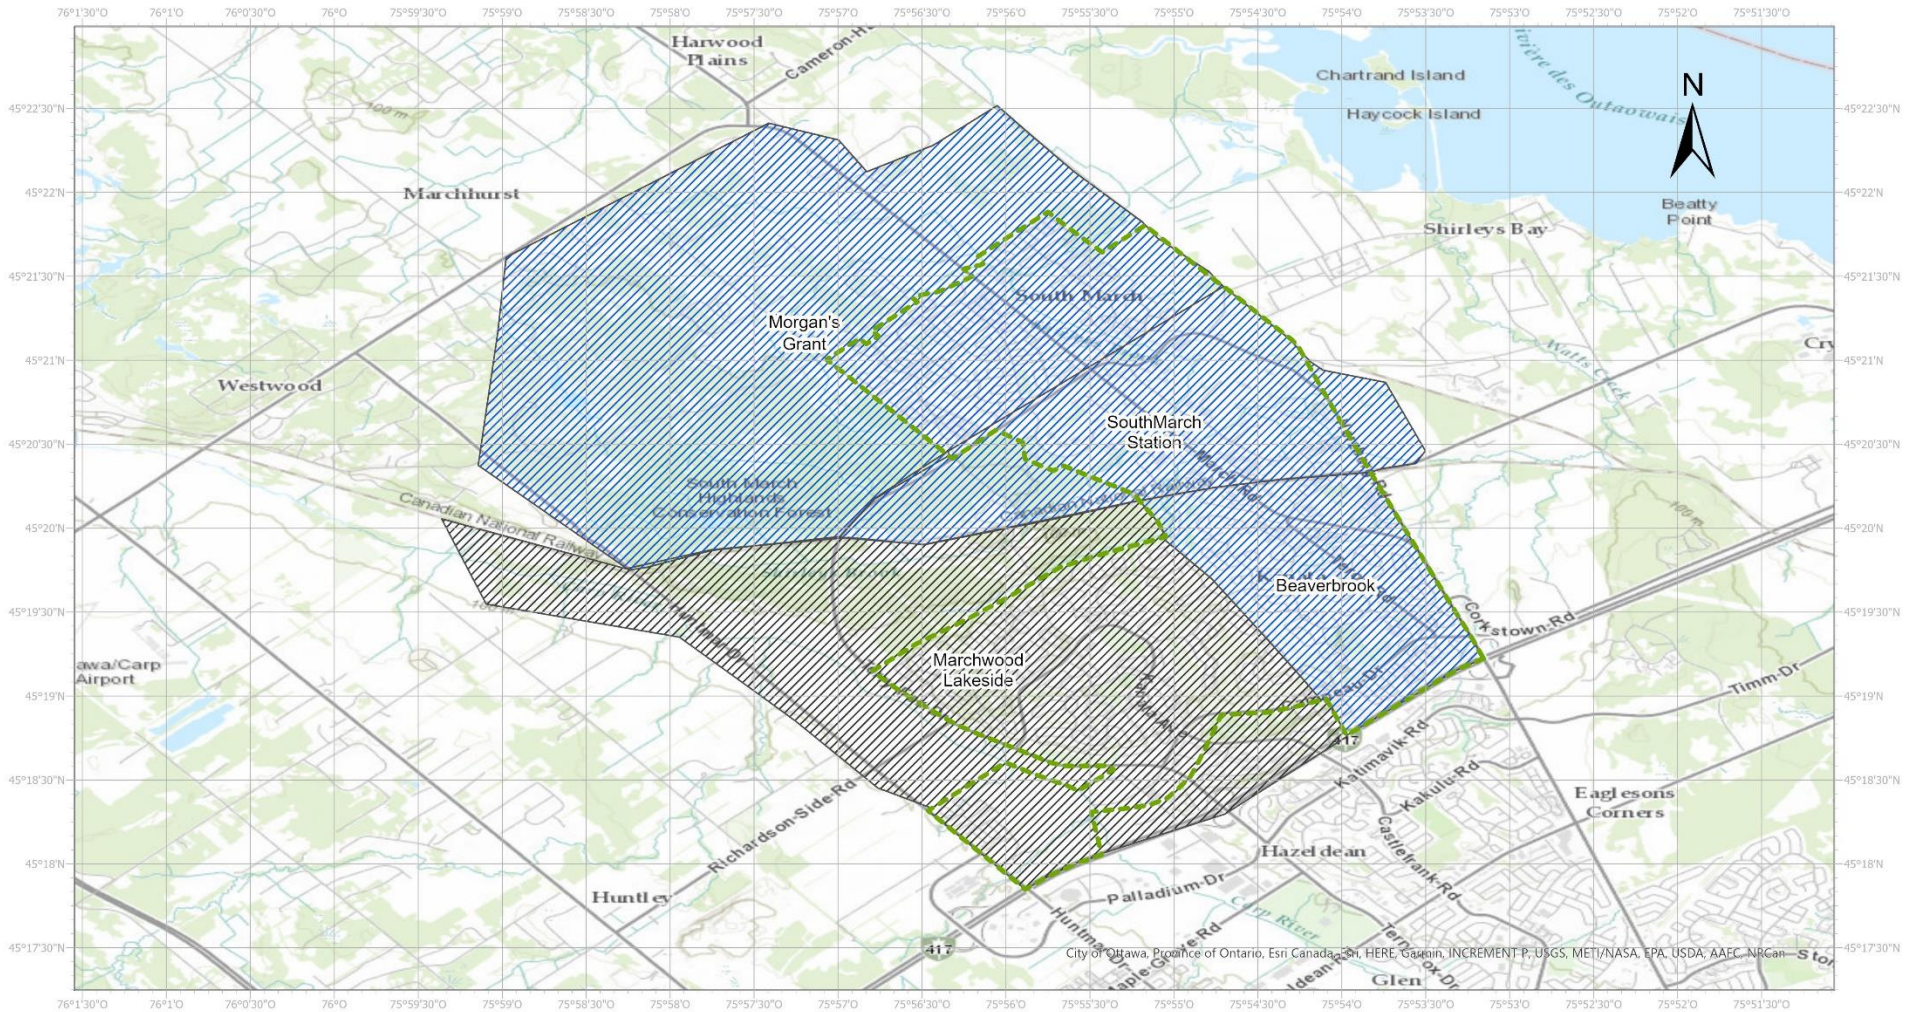

Was there a treatment?: Yes No

Type of treatment: Ground Aerial

Date of treatment: A 9th treatment began on August 11th and ended on August 18th. Aerial treatment (drone) was carried out on August 16th, localized in the Beaver Pond area and Carp River area. Ground treatment was completed in all protected sectors.

Since mosquitoes can fly up to 2 km, (even more in some circumstances), it is important to mention that treatments done in one area reduce nuisances for all the protected aera in Kanata North, not only the area treated.

TRAPPING

Was there trapping this week? : Yes No

Number of traps:

Location:

Trapping operations have been suspended to focus our efforts on ongoing treatments. They will resume the following week.

CITIZEN REQUESTS

Were there any key requests from citizen or from city this week? Yes No

Two requests were received this week, mostly to have some information about the program: one in Briarbrook and the other on Saddleback Cres.

Forecast for next week (August 4th to August 10th):

We will proceed with the post-treatment of the sites and carried out some minor treatments to improve the 9th treatment.

Possible treatment: Yes No

If yes:

Type of treatment: Ground Aerial

Date of planned: ?
